DL2 is a modular data recorder, developed for wide range of applications and process measurements. Its modular construction and available up to twelve different I/O inputs, allows to configure customized measurement system.

The device is intended to measure process signals in industrial applications and may be used to measure physical values processed into a standard signals, e.g. temperature, humidity, pressure, flow, level and chemical parameters, etc. The device is perfectly suited for slow rate variable runs with changes at a few seconds intervals.

Device can communicate with master system through Ethernet port (Modbus TCP protocol, web server) or through RS-485 port (Modbus RTU protocol) and can work in distributed control systems.

Simple configuration does not require extra programming skills. Device may be quickly configured by the user from front panel or using commissioning software on PC.

### BASIC FUNCTIONS

- Measurement of process values
- Measurement of flow - two totalizers for each channel
- Two alarms or control thresholds for each channel
- Tracking the minimum and maximum values
- Math functions
- User characteristics
- Results displaying as graph charts and tables
- Data and events logging
- Communication with a computer system
- E-mails regarding alarm states and cyclical reports with totalizers values (up to 5 recipients)

### RECORDING MEASUREMENT RESULTS

- Data recording rate for process values from 2 s up to 24 h; two recording rates, toggled by alarm state
- Data recording rate for totalizers from 1 min up to 24 h
